

**Petal 1: Favorite knowledges or Fields of Interest:**

1. Photography
2. Art
3. Writing
4. Film
5. Books

**Favorite Mediums:**

1. My notebook
2. Pen and Ink
3. Film (Kodak)
4. Gouache
5. My computer

**Petal 2: My preferred kinds of people to work with:**

1. Funny
2. Intelligent
3. Optimistic
4. Motivated
5. Personable

**Petal 3: What I can do and Love to do:**

1. I can knit, crochet, and sew
2. I draw constantly
3. I write everyday (I'm writing a novel)
4. I take photographs and know how to develop film
5. I read a lot
6. I love learning about the world (through media-newspapers, articles, tv shows)
7. I love to travel
8. I love making people laugh
9. I love doing puzzles (crosswords or sudoku)
10. I love kids (I want to have a lot of kids)

**Petal 4: My favorite working conditions:**

1. Being able to work from home
2. Somewhere quiet with comfortable chairs
3. Windows
4. Semi private
5. Laid back environment

**Petal 5:**

**Preferred Salary:** 60,000 – 100,000

**Level of responsibility I'd like to have:** I wouldn't want to be in a high-risk leadership position, but I'd still want my input to have importance.

**Other responsibilities hoped for:** I want to hopefully be responsible for the front-end of various applications and the overall image, having the ability to interact with the clients and figure out what they want and how to make the product better with them in mind.

**Petal 6: Preferred places to live:**

1. New York/New Jersey
2. California
3. Chicago
4. London
5. Toronto

**Petal 7: My goal, purposes, or mission in life:**

My purpose in life is to impact the people of the world with my work. Even after I'm gone I want my work to live on and continue resonating with people.

I went to school in Brooklyn until I was twelve. After twelve I attended the last 5 years in my hometown of West Orange. I was used to the visceral hustle bustle and was forced to tone it down into the calm and familiar. Getting an education in two very different environments has definitely shaped the person I am today. It has given me the ability to adapt to different atmospheres. Despite finishing high school in the suburbs, I have always been a city girl at heart. I attended the School of Visual Arts and received a BFA in Film. A major and career that is fast paced and cutthroat. I have developed the ability to multitask under pressure.

In high school and in college, I volunteered at soup kitchens, elementary schools, and interned at distribution and postproduction companies. In both places I was given the responsibility of transporting important packages. These internships have also taught me responsibility, punctuality, and motivation. My first and only job was working at a restaurant as a hostess. I still work at the restaurant and it has been a little less than a year. I firmly believe everyone should work in retail or a restaurant at least once in his or her life. Jobs such as that put things into perspective. You learn how to treat people with respect. I've had many encounters with rude, inconsiderate people and have managed to remain calm and collected despite their treatment of me. I have also worked with a plethora of very different people. My background in film has also contributed to my knack for working in fast, high-pressure environments.

I love being able to create something. I never imagined I'd be any good at web development—decent at most—however the more I learn (and try to understand) the more I like it. I'm a very creative person. I love writing and other various forms of art. My dream career would involve working from home so I can travel. I want to experience different cultures and document them through photography or film. I also want to share everything I know with the world. I want to combine my passion for art and web development into one. I look at web development as another art form. Learning how to code is like putting a puzzle together with a different result every time. It is a different language. Although it is very difficult, I do enjoy learning it. Having the ability to create something from nothing using a complex code language astounds me. I love expanding my mind and creating products that are capable of molding the future and impacting lives.
